

Endpoint Protection Software

Infosec IQ Event-Activated Learning

Endpoint protection is a staple in many security infrastructures because it detects and blocks cyber attacks when all other stopgaps fail. Although a full suite of security tools help prevent a large percentage of security breaches, even the best solutions fail to recognize 100% of the security risks that slip past technical controls and employee detection.

Regardless of what endpoint protection solution you use, your employees must be prepared to detect, avoid and report security threats circumventing your technical controls. Integrating your endpoint protection solution with Infosec IQ will:

- Transform blocked security events into teachable moments, delivering relevant awareness training in the teachable moment
- Seamlessly automate your awareness training program around real threats targeting your workforce

Infosec IQ Endpoint Protection Integration

Infosec IQ Event-Activated Learning integrates with your endpoint protection provider to deliver awareness training to employees based on their personal involvement in security-related events. Personalized Infosec IQ training is automatically activated based on the event types outlined in your endpoint protection account and delivered immediately, in the most teachable moment.

Benefits

-  Critical Reinforcement
-  Higher Engagement
-  Better Retention
-  Write Your Own Integration

Integration Details

Infosec IQ integrates with most endpoint protection providers. By leveraging both Infosec IQ's open API and your endpoint protection provider's APIs, you can build rules that automatically enroll employees into Infosec IQ trainings based on any security events supported by your endpoint protection provider. This allows you to deliver the most relevant training based on the specific security threats that your employees engage with.

Email-Level Learner Segmentation

Infosec IQ event-activated training is delivered and tracked based on individual learner email addresses. This means only security events associated with a specific email address can be used to issue Event-Activated Learning modules.

Endpoint Protection Provider Support

Infosec IQ event-activated learning is compatible with the following endpoint protection providers:

If you don't see your endpoint protection provider listed above, please let us know. We'd be happy to explore integration options for your solution.

Integration Setup

Contact your sales or client service representative to get started. We will work together to build the integration framework and enable Event-Activated Learning in your Infosec IQ account.

As an alternative, you can build your own integration between Infosec IQ and your endpoint protection solution using our [Open API](#).

About Infosec

At Infosec, we believe knowledge is the most powerful tool in the fight against cybercrime. We help IT and security professionals advance their careers with a full regimen of certifications and skills development training. We also empower all employees with security awareness and training to stay cybersecure at work and home. Founded by smart people wanting to do good, Infosec educates entire organizations on how to defend themselves from cybercrime. That's what we do every day — equipping everyone with the latest security skills so the good guys win.
